	Pre-development meeting with Developers	3/2
	Sprint Creation and Roadmapping/ Start of Development Phase	3/3
	End of Development Phase	3/18
	QA and Bug Fixes	3/21
	Website Launch	7/23

TEST TASK FOR INTERNS

Our philosophy

To make sure we are not wasting time of anyone. We have decided to conduct a small test to test your candidature. Please note, This is the only test task and will decide your selection.

The test task

You have to make "three-page Form Submission website" using Git & Heroku/free hosting on git. (or any other platform or any other set of stack).

End user

This form will basically register the divorced women with us.

User Interface in the test task

You don't have to worry about the UI at present and for the test purpose you have to prove that you can achieve the functionality.

The test website forms will be as follows:

ww.XYZABC.com/FORM 1—
(page 1)

Name-

State issued Divorce Id-

Next

Conti...

Date of Birth-

Nationality-

Next

Conti...

Marital Status-

Highest education-

Submit

The test website must have following features - -

1. The data saving should be sequential and the next buttons should act as submit. To understand it with a use case, Imagine a user named Sita decide to fill the form. She filled the first form, which is Name & state Issued divorce Id. The moment she filled the form and clicked next button, the data must be saved and received at our end. In other words, Even if the user decide to fill the first form and do not submit the data of second and third, then also the data of first form should get saved & submitted. And if the user enters the data for first and second and decides not to submit the last, third one, then also the data should be received.

2. At our end, Each One user should have one unique table and you must name the table as 1, 2, 3 etc. So if we will open table number 1- we will have all the 6 data entries of Sita.

The road ahead

We believe if someone is skillful, that he/she can do the work as desired. And that is always the only requirement. Or the way we put it- If he can do it. He will do it. We recommend you absorb the problem first, create a pseudo code, consider using tools available online and then submit the test task before 7 p.m 17 february. After successful submission of the test task, we will call you for the telephonic interview and will guide you ahead.
If you are not able to complete the test task in given period of time for some reason, then you can state the reason and ask for extension.

Regards.
